ABSTRACT

Hydrographic data collected during R.V. Oceanus cruise 133, leg VII are presented. These data include temperature, salinity and dissolved oxygen observed at standard levels by a Neil Brown Instrument Systems' CTD-02 profiler and salinity, dissolved oxygen, silicate, phosphate and nitrate values at the observed depths of the collected water samples. Ninety-four stations were occupied on a meridional section at (nominally) 52° West from Brazil to Greenland. Also presented are a series of sectional profiles of the six observed parameters as a function of depth.

HYDROGRAPHIC DATA FROM R.V. OCEANUS CRUISE 133, LEG VII

Data Report

by

George P. Knapp and Henry M. Stommel

DATA DESCRIPTION

This report tabulates the hydrographic data obtained during the R. V. Oceanus cruise 133, leg VII. During April-May 1983, ninety-four stations were occupied on a meridional section at (nominally) 52°W from the coast of Brazil to the coast of Greenland. The distance between stations was 30 nautical miles with closer spacing on the continental slopes and while crossing the Gulf Stream. On each station a Neil Brown Instrument Systems' Conductivity-Temperature-Depth-Oxygen Profiler (CTD-02) equipped with a General Oceanics Co. rosette sampler with twenty-four 1.2 liter Niskin bottles and a bottom finding pinger was lowered to within 20 meters of the bottom. During each station, pressure, temperature, conductivity and dissolved oxygen were measured continuously. Water samples were collected for calibration of the CTD-02 salinity and oxygen sensors and for the analysis of silicate, phosphate and nitrate.

Water-sample salinities were measured on a Guildline Model 8400 Autosol salinometer which was standardized using a single batch of I.A.P.S.O. standard water: Batch P-93. These values are believed accurate to ± 0.003 ppt. Dissolved oxygen values were determined by a modified Winkler titration method (Carpenter, 1965) with a colorimetric endpoint determination. Standardizations were performed with 0.01N potassium iodide solutions prepared just prior to the cruise. Accuracy of the oxygen values is about ± 0.05 ml/l. Silicate, phosphate and nitrate analysis were performed at sea on a Technicon AutoAnalyzer using standard solutions prepared aboard ship from preweighed standards. The final phosphate values seem accurate to $\pm 1\%$, and the silica and nitrate values to $\pm 2\%$. The temperature sensor on the CTD-02 was calibrated before and after the cruise and is believed accurate to $\pm 0.002^\circ\text{C}$. The raw data from the temperature, conductivity and oxygen sensors were processed by the standard techniques of the W.H.O.I. CTD Group (Millard, 1982). Both the final CTD-02 data set (sorted by 2 db intervals) and the nutrient data set have been submitted to the National Oceanographic Data Center.

The CTD-02 and hydrographic data in this report are presented in two separate formats. The first listing on each page is the CTD-02 temperature, salinity and oxygen values at standard pressures. These values are the average of a six decibar segment of the water column, centered on the standard pressure. Following the oxygen column are calculated variables, based on the 1980 equation of state of seawater (Fofonoff and Millard, 1984): potential temperature, density relative to 0, 1500 and 3000 db, dynamic height, Brunt-Vaisala period and depth.

The second listing is of the water-sample data. In the first two columns are the CTD-02 pressure and temperature at which the samples were collected. Following these are the water-sample salinity, dissolved oxygen and nutrient values, theta, sigma-theta, sigma-3 and depth.

Also presented are sectional profiles showing the six observed properties as a function of depth. Vertical distortion is 500:1. The bathymetry between stations was recorded continuously during the cruise, and is plotted here at approximately four nautical mile intervals. The dots on the nutrient profiles represent bottle positions.

ACKNOWLEDGEMENTS

We wish to thank the officers and crew of the R.V. Oceanus for the excellent cooperation and fine seamanship exhibited during the cruise, the last leg of an eighteen week voyage away from home for most of them. This work was generously supported by the National Science Foundation grant no. OCE80-15789.

16. Abstract (Limit: 200 words) Hydrographic data collected during R.V. <u>Oceanus</u> cruise 133, leg VII are presented. These data include temperature, salinity and dissolved oxygen observed at standard levels by a Neil Brown Instrument Systems' CTD-02 profiler and salinity, dissolved oxygen, silicate, phosphate and nitrate values at the observed depths of the collected water samples. Ninety-four stations were occupied on a meridional section at (nominally) 52° West from Brazil to Greenland. Also presented are a series of sectional profiles of the six observed parameters as a function of depth.
