

**THE EFFECTS OF THE EXXON VALDEZ OIL SPILL,
PRINCE WILLIAM SOUND,
ON THE NMFS AUKE BAY FISHERIES LABORATORY LIBRARY**

Paula Johnson
Librarian
NMFS, Auke Bay Laboratory
Auke Bay, Alaska, U.S.A.

ABSTRACT

A 15-20 minute slide show outlining the ASL's baseline work in the Prince William Sound area in the early 1970s, the laboratory studies on the effects of oil, the oil spill itself, the National Resources Damage Assessment projects by the ABL and the effects of the spill on the Library.

The presentation is a slide show which was put together for a workshop titled Oil Spill Resources -- a Panel Discussion, at the 1990 Alaska Library Association Conference, Anchorage, Alaska, March 2-6, 1990. The workshop was an interactive discussion between panel members, librarians from public, special, and university libraries, and the attendees. Each panel member shared information on oil spill resources available at their libraries and discussed the types of services provided in response to the information demands resulting for the Exxon Valdez oil spill.
