Dr. D. J. Stelzner
Anatomy Department
State University of New York
Upstate Medical Center
Syracuse, New York 13210

Dear Dr. Stelzner:

Thank you very much for your letter of January 8. I understand your present situation; we can correspond concerning a prolonged visit at a later date. In the meantime, Mr. Skoff of Boston U. has accepted a position as a research associate. I think we shall start out on synaptology in the rat fetus.

Of course, I am very much interested in your work on synaptology in the chick embryo, and I hope you will keep me posted. Of special interest, of course, is the question of where the reflex circuits are closed; response to tactile stimulation is observed first at or about day 7 to 7½.

With my best regards,

Sincerely,

Viktor Hamburger
