

Department of Biology

WASHINGTON
UNIVERSITY
IN ST. LOUIS

August 27, 1982

Dr. Harris Mackey
123 West 132 Street
New York, N.Y. 10027

Dear Dr. Mackey,

Thank you for your letter of August 17. I think your best bet would be a postdoctoral fellowship in one of the many training programs or in a laboratory which specialized in neuroembryology. Our own Medical School has a training program in neurobiology which includes neuroembryology. A pamphlet describing our activities is in preparation: you can ask the Office of Graduate Affairs, Washington University School of Medicine, Box 8072, St. Louis, MO, 63110 to send you one. The Society for Neuroscience, 9650 Rockville Pike, Bethesda, Md. 20814 will send you a list of Training Programs in the country, upon request.

The only opening for a postdoctoral fellow that I know of is with Dr. Thomas Finger, Department of Anatomy, University of Colorado Medical Center Denver, Colorado 80262. I have sent him your c.v. and you may hear from him, or contact him.

I hopw this answers your questions.

Sincerely,

Viktor Hamburger
Professor emeritus of Biology .
