7 April 1970

Dear Trink,

The publisher sent me a copy of "Cells into Organs", doubtless at your instigation. Congratulations on it. I thought it was beautifully clear and organised. If anything will divert a few of the young into righteous paths, this will. There are only 3 serious groups of cell behaviorists in the world, yours, the Russians and mine, and apparently we none of us like our governments. The subject must be good training.

I enclose another episode in our cell movement story. In it I am beginning to retreat from what I used to think about the mechanism. Of course we shall have to do some effective surface labeling, demonstrating the supposed surface assembly, before we can expect to carry conviction. Would you be kind enough to hand the paper on to Albert Harris when you've finished with it? I was most delighted to get a notification from the Damon Runyon fund that he has got his fellowship.

Regards,

Michael
