## Acquisition Description

Bacteria counts from Flow Cytometer

[ [table of contents](#) | [back to top](#) ]

---

## Parameters

Parameter	Description	Units
cast	CTD cast number from which the water samples were taken	
month_gmt	month of year (1-12), GMT time	
day_gmt	day of month (1-31), GMT time	
time_gmt	time of day (hhmm.mm), GMT time	hours and decimal minutes
lat	latitude, negative = South	decimal degrees
lon	longitude, negative = West	decimal degrees
depth	depth at which the water bottle was tripped	meters
number	number of bacteria cells counted	cells per milliliter *10 <sup>6</sup>

## Instruments

<b>Dataset-specific Instrument Name</b>	SeabirdCTD
<b>Generic Instrument Name</b>	CTD Sea-Bird
<b>Dataset-specific Description</b>	Sea Bird CTD, no specific unit identified. See also other SeaBird instruments listed under CTD.
<b>Generic Instrument Description</b>	Conductivity, Temperature, Depth (CTD) sensor package from SeaBird Electronics, no specific unit identified. This instrument designation is used when specific make and model are not known. See also other SeaBird instruments listed under CTD. More information from Sea-Bird Electronics.

<b>Platform</b>	R/V Endeavor
<b>Start Date</b>	1999-06-13
<b>End Date</b>	1999-06-30
<b>Description</b>	process <b>Acquisition Description</b> Bacteria counts from Flow Cytometer

## Project Information

### U.S. GLOBEC Georges Bank (GB)

**Website:** [http://globec.whoi.edu/globec\\_program.html](http://globec.whoi.edu/globec_program.html)

**Coverage:** Georges Bank, Gulf of Maine, Northwest Atlantic Ocean

The U.S. GLOBEC Georges Bank Program is a large multi-disciplinary multi-year oceanographic effort. The proximate goal is to understand the population dynamics of key species on the Bank - Cod, Haddock, and two species of zooplankton (*Calanus finmarchicus* and *Pseudocalanus*) - in terms of their coupling to the physical environment and in terms of their predators and prey. The ultimate goal is to be able to predict changes in the distribution and abundance of these species as a result of changes in their physical and biotic environment as well as to anticipate how their populations might respond to climate change. The effort is substantial, requiring broad-scale surveys of the entire Bank, and process studies which focus both on the links between the target species and their physical environment, and the determination of fundamental aspects of these species' life history (birth rates, growth rates, death rates, etc). Equally important are the modelling efforts that are ongoing which seek to provide realistic predictions of the flow field and which utilize the life history information to produce an integrated view of the dynamics of the populations. The U.S. GLOBEC Georges Bank Executive Committee (EXCO) provides program leadership and effective communication with the funding agencies.

## Program Information

### U.S. GLOBAL ocean ECosystems dynamics (U.S. GLOBEC)

**Website:** <http://www.usglobec.org/>

**Coverage:** Global

U.S. GLOBEC (GLOBAL ocean ECosystems dynamics) is a research program organized by

oceanographers and fisheries scientists to address the question of how global climate change may affect the abundance and production of animals in the sea. The U.S. GLOBEC Program currently had major research efforts underway in the Georges Bank / Northwest Atlantic Region, and the Northeast Pacific (with components in the California Current and in the Coastal Gulf of Alaska). U.S. GLOBEC was a major contributor to International GLOBEC efforts in the Southern Ocean and Western Antarctic Peninsula (WAP).
