Reference system

Renewable NRG Systems reference Lidar: **WLS7-94**

The Reference Lidar was certified by Danish Technical University (DTU) in January 2019 at the Høvsøre Test Site.

The reference Lidar measurement has been compared to a 116m reference mast with a test process approved by DANAK.

Data analysis

Data used for comparison are averaged 10 minutes data.

Wind speed and direction data are compared using regression curves applying the model ***y=ax+b*** . Where ***y*** is the Lidar wind speed, ***x*** the reference wind speed, ***a*** the regression gain and ***b*** the regression offset. ***R²*** is the coefficient of determination.

Wind speed mean deviation presented in this report is the mean of wind speed difference between the reference and the tested Lidar during the validation period. The mean deviation and its standard deviation are given in m/s.
