Supplementary Figure. Post-fire trajectories of EVI (B), albedo (C), and albedo radiative forcing (D) for all ecoregions. Top panel (A) represents the sample size for each of the four ecoregions as a percentage of the total with time since fire (see Figure 4 for total sample size). Green represents the North Slope, Red represents the Noatak, Blue represents the Seward, Pink represents the Southwest, and the black line represents the mean of all ecoregions. The grey area represents the 90% confidence interval.
