Supplemental Figure 1
Supplemental Figure 2

The graph shows a scatter plot of Daytime $O_2$ Production (μmol kg$^{-1}$ d$^{-1}$) vs. Daytime DIC Consumption (μmol kg$^{-1}$ d$^{-1}$). The plot includes three lines with different PQ values: PQ = 1.4, PQ = 1, and PQ = 0.6. The data points are represented by plus signs (+). The graph provides a comparative analysis of the relationship between $O_2$ production and DIC consumption.
