Abstract:

The Secretariat of the Pacific Community (SPC) library system is a private corporate library that exists to enhance and service SPC's professional and technical staff, its projects and programs, and to provide information resources, including research, current awareness, acquisitions and information management to the SPC. The Library also seeks to promote and enhance information access and delivery to our member PICTs (Pacific Islands Countries and Territories). The staff consists of the Librarian and five library assistants. The current collection has regional and international publications in French, English, and to a limited extent some Pacific languages. Of the approximate 70,000 total holdings, one quarter is on marine science and fisheries, making it the largest subject area collection in the library, and of that, 300 items are FADs (Fish Aggregations Devices) related. SPC Library provides important services to assist the SPC staff in their work, including document delivery, bibliographical research, Interlibrary loans, book orders, and access to electronic journals. The SPC Library has been a member of the IAMSLIC network since 2006. The IAMSLIC Z39.50 is an invaluable resource for providing research support to SPC fisheries staff. The most collaborative work between the Library and Fisheries sections is the Fisheries Digital Library. The library catalogs all the meeting papers and reports related to fisheries, and these are then scanned, OCR'd, and made accessible using Greenstone. DVD versions were distributed throughout the PICTs, and it is also available online via <http://www.spc.int/DigitalLibrary/FAME>.
