OFFICE OF THE DIRECTOR NOV 21 1985

November 16, 1985

Mr. Johnsteel, Director
WOODS HOLE OCEANOGRAPHIC INDTITUTION
Falmouth, Mass., 02501

Dear Mr. Steel:

Enclosed are photos of my recently completed metal, fully detailed model of the "Titanic". This ship was built for the Merle Norman Museum in Sylmar, California. These people bought my similarly complete model of the French liner, "Normandie" last year.

I have been tremendously excited about your deep sea photos pf the Titanis wreak, particully the color stills. You can see how a dedicated museum model builder like myself, would not be satisfied with a ten second TV view of the fantastic deep sea photographs, especially the general view of the starboard side showing the missing forward funnel.

I hope you will have me informed as to how I can secure color prints of these great stills. I have rejoined the National Geographic society so as not to miss them if it is covered by the magazine.

I also include the specification of the "Titanic" model so you can see how thoroughly I go into the construction. I hope to build another Titanic when I can find a customer, someone who does not consider solid wood sculptures a model

Very truly yours,

Eugene O. Clay
