Dr. J. P. Trinkaus
Department of Biology
Yale University
New Haven, Connecticut

Dear Trinkaus:

I have just finished looking through your paper on the "Mechanisms of Morphogenetic Movements," and it strikes me as being an excellent, comprehensive, and very useful treatment of the subject. I was glad, incidentally, to see Holtfreter given the full credit that he deserves for starting so much of this work. As you know, I'm studying the movements of salamanders, not of their cells, these days, but I'm nonetheless still interested in cell movements and am glad to have available a survey of the current status of the problem.

Best regards,

Victor
