Figures S1

**Introduction**

The supplementary figure 1 presents a comparison of  $\epsilon\text{Nd}$  obtained on planktonic foraminiferas of core RECORD23 for the Holocene (this study) and of previous  $\epsilon\text{Nd}$  values obtained from scleractinian cold-water corals (*Madrepora oculata* and *Lophelia pertusa*) from the same core (Dubois-Dauphin et al., 2017).

**Figure S1.**  $\epsilon\text{Nd}$  results from foraminiferal record of core RECORD23 for the Holocene (blue circles), compared with published  $\epsilon\text{Nd}$  values from cold-water corals of core RECORD23 (red diamonds, Dubois-Dauphin et al., 2017) and nearby modern seawater  $\epsilon\text{Nd}$  at similar depth (451 m).
