

Microbial Diversity

Marine Biological Laboratory

2019

Final Reports

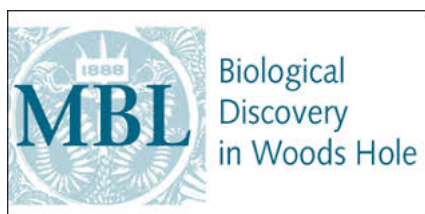

TABLE OF CONTENTS

Same Game, Different Players: Tannin-degrading Bacterial Consortia Differ Across Microhabitats in Cedar Swamp	Elizabeth Archie	4
A First Look at a Novel Association Between a Filamentous Cyanobacteria and a Diatom	Joao Ascensao	25
First Look into the Skin Microbial Community of the Okinawa Bobtail Squid (<i>Euprymna berryi</i>)	Capucine Baubin	45
Sulfur Cycling and Aggregate Formation in Trunk River “Lemonade” Blooms	Anna Bennett	59
Isolation and Characterization of Methanotrophic Communities from Cedar Swamp	Sheila Bonitatibus	70
Investigating the Potential for Sterol Biosynthesis in Demosponge Bacterial Symbionts through Filipin Imaging	Malory O. Brown	87
Responses to Drought and Rewetting in Cyanobacteria Mats from Little Sippewissett	Anna Depetris	102
Finding the Fun[gus] in the Sea [Anemones]	Lymarie M. Díaz-Díaz	117
The Interaction Between Bacteria and Fungi as a Defense from Phage Infection	Adi Eshel	131
Similarity in Surface Communities of Cyanobacteria Suggests Selection for Specific Symbionts	Emily Fogarty	145

The Pink Side of the Sand: Anoxygenic Phototrophic Bacteria Coping with High Oxygen Levels in Little Sippewissett Salt Marsh (Falmouth, MA)	Pedro Junger	158
Prospecting for Antimicrobial-producing Actinomycetes in Soils and Aquatic Environments around Woods Hole	Babasola Adewunmi Osopale	177
Sequencing the Integrative Mobilome of Trunk River	Natalia Quiñones-Olvera	188
Profiling the Eukaryotes of Little Sippewissett Salt March	Shyam Saladi	200
Gut Microbiome of the Atlantic Horseshoe Crab (<i>Limulus polyphemus</i>)	Tobias Sandfeld	215
Targeted Phage Disruption of a Model Estuarine Community	William F. Schroer	236
Viral Interactions with the Pink Berry Aggregates of the Sippewissett Salt Marshes	Hannah Starcevich	247
Microbial Reduction and Disproportionation of Elemental Sulfur in the Sediments and Pink Berries of the Great Sippewissett Salt Marsh, Falmouth (MA, USA)	Lot van der Graaf	259
Identification of Putative Fast-Moving Vacuolar Volutin Granules in the Marine Yeast <i>Scheffersomyces spartinae</i>	Alex Villarreal	276
